

Notes 4

How to install and remove software using the APT command

how to install: `sudo apt install` example: `sudo apt install cuyo`

How to remove: `sudo apt remove` example: `sudo apt remove cuyo`

How to create a shell script step by step including screenshots and how to run it. Try to be as detailed as possible.

Step 1 Create the file

First go to text editor do `#!/bin/bash` and then click on hamburger tab and save as `example.sh` in a folder that you made named scripts

Step 3 Add your code

first line will be `#!/bin/bash` so go to the second line and write any code. for example `echo "hello world"` `echo -n "DATE: " date` . then proceed to save

Run the Script

Go to the terminal and write down `bash ~/scripts/example.sh` then it will show the code you made from text editor
